

# METEOR DETECTION SOFTWARE

---

*imace*

Ivan SAULI

Engineer

2009-2010

# THE "PODET-MET" PROJECT

## Purposes:

- First French video meteor network
- New meteor observation technics
- High precision meteoroids orbits study

J. Vaubaillon – P. Atreya - F. Colas – S. Bouley – I. Sauli

# THE "METEORFINDER" SPECIFICATIONS

- Windows compatible

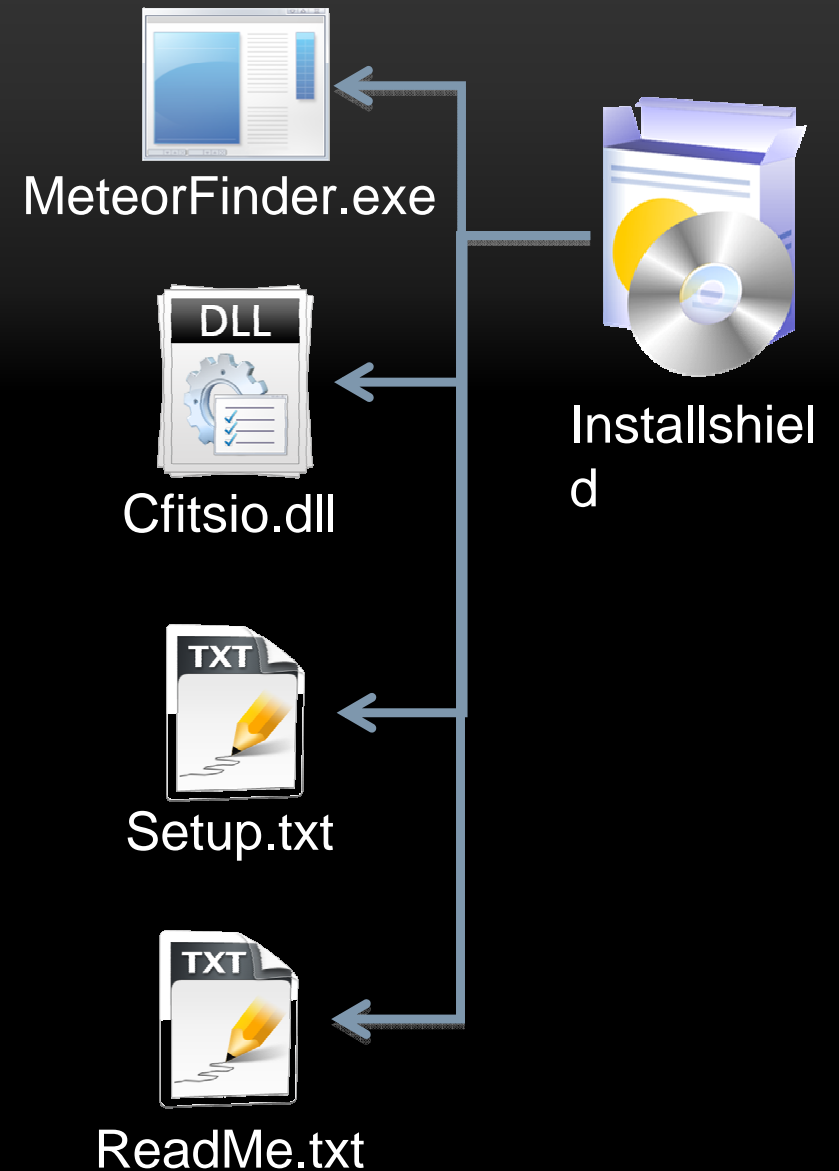

- Use of **FITS** files inputs

**F**lexible **I**mage **T**ransport **S**ystem

- Detection algorithm

# THE "METEORFINDER" DATA EXAMPLE

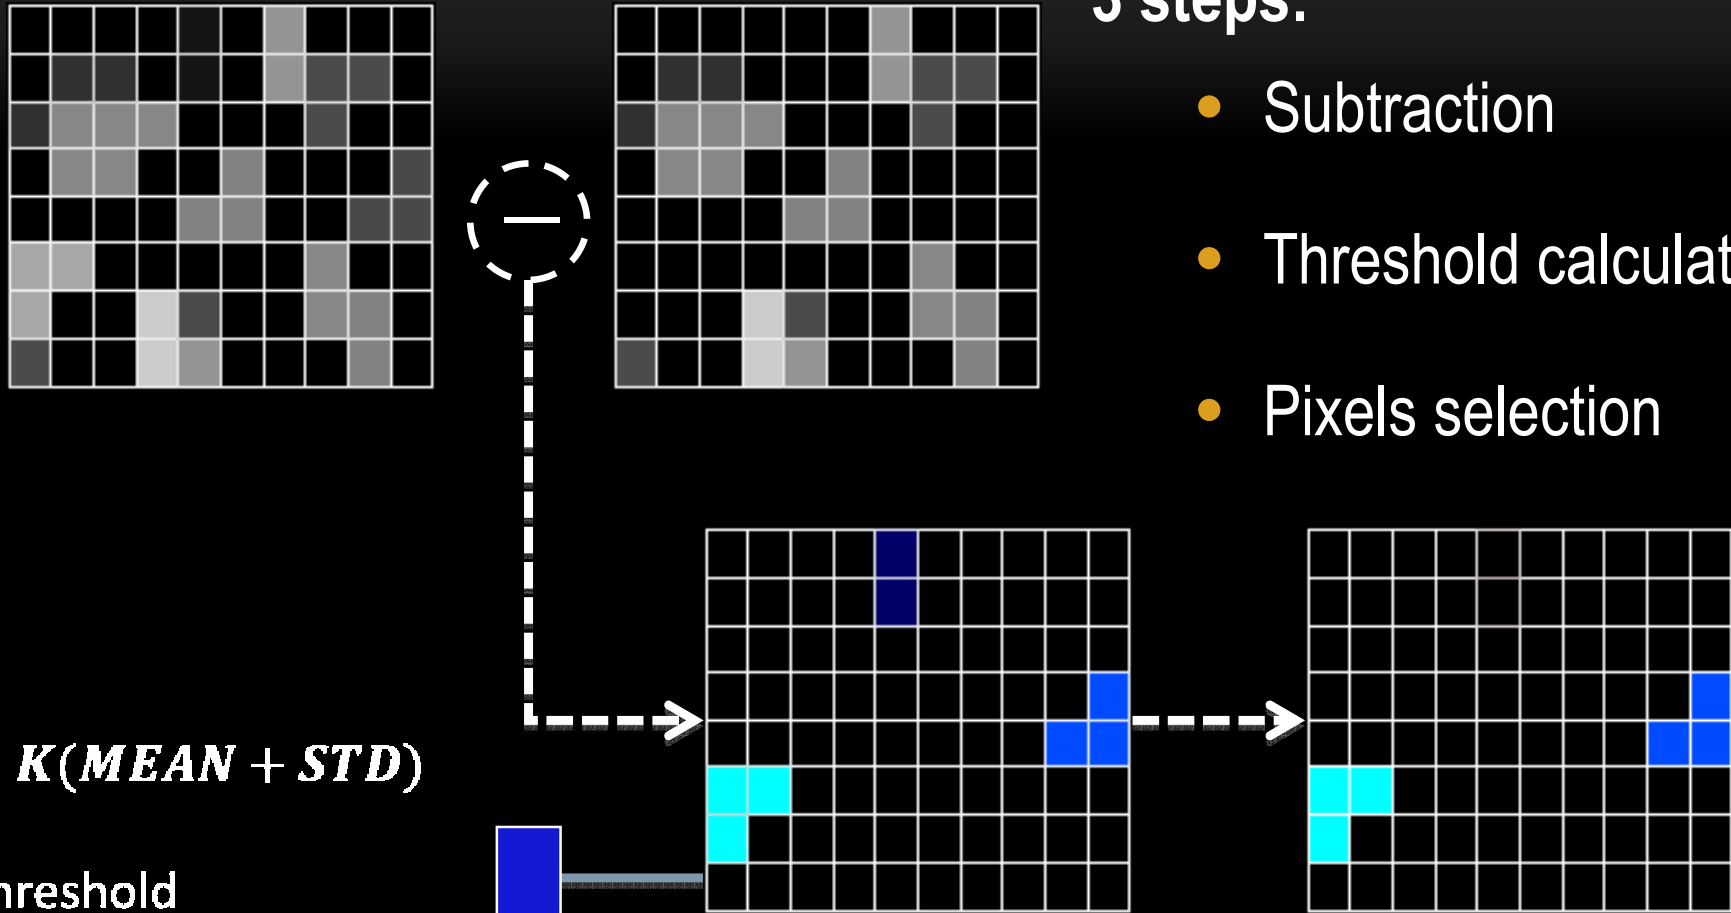

Size:  
4032x2688

# THE "METEORFINDER" MOVEMENT DETECTION

3 steps:

- Subtraction
- Threshold calculation
- Pixels selection

$$THR = K(MEAN + STD)$$

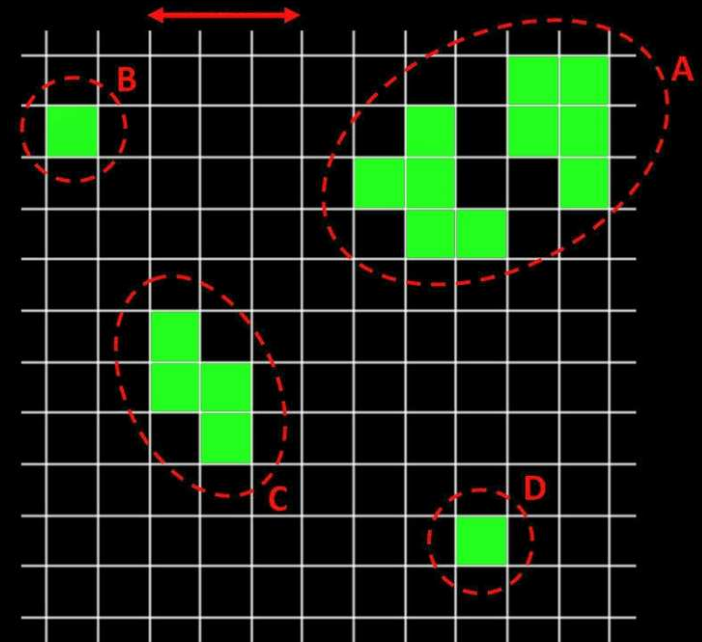

THR : Threshold

STD : Standard Deviation

# THE "METEORFINDER" GROUPING ALGORITHM & CENTROIDDING

- Critical radius
- Minimum size of each group
- Number of groups
  
- Centroid calculation ( $X_c, Y_c$ )

$$X_c = \frac{\sum_{i=0}^n X_i V_i}{\sum_{i=0}^n V_i} \quad Y_c = \frac{\sum_{i=0}^n Y_i V_i}{\sum_{i=0}^n V_i}$$

# THE "METEORFINDER" INPUT "SETUP.TXT" FILE

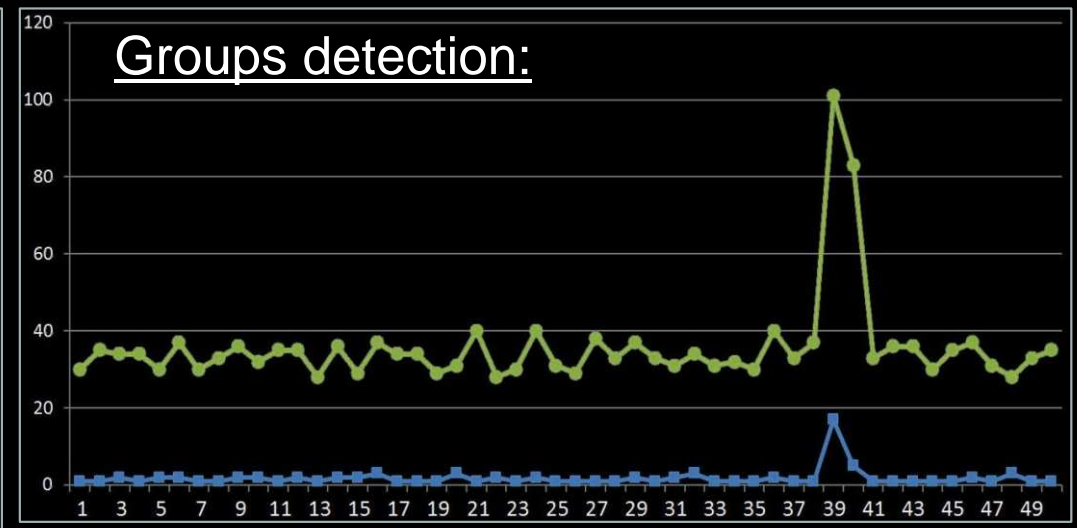

## Parameters list:

Input path	=	C:\Documents\fit_folder	
K	=	2.5	(Default: 3)
CriticalRadius	=	20	(Default: 20 for groups, 50 for events)
SizeOfGroups	=	20	(Default: 20 for groups, 50 for events)
NbGroups	=	10	(Default: 12 for groups, 1 for events)
Threshold	=	0	(0 for automatic calculation)

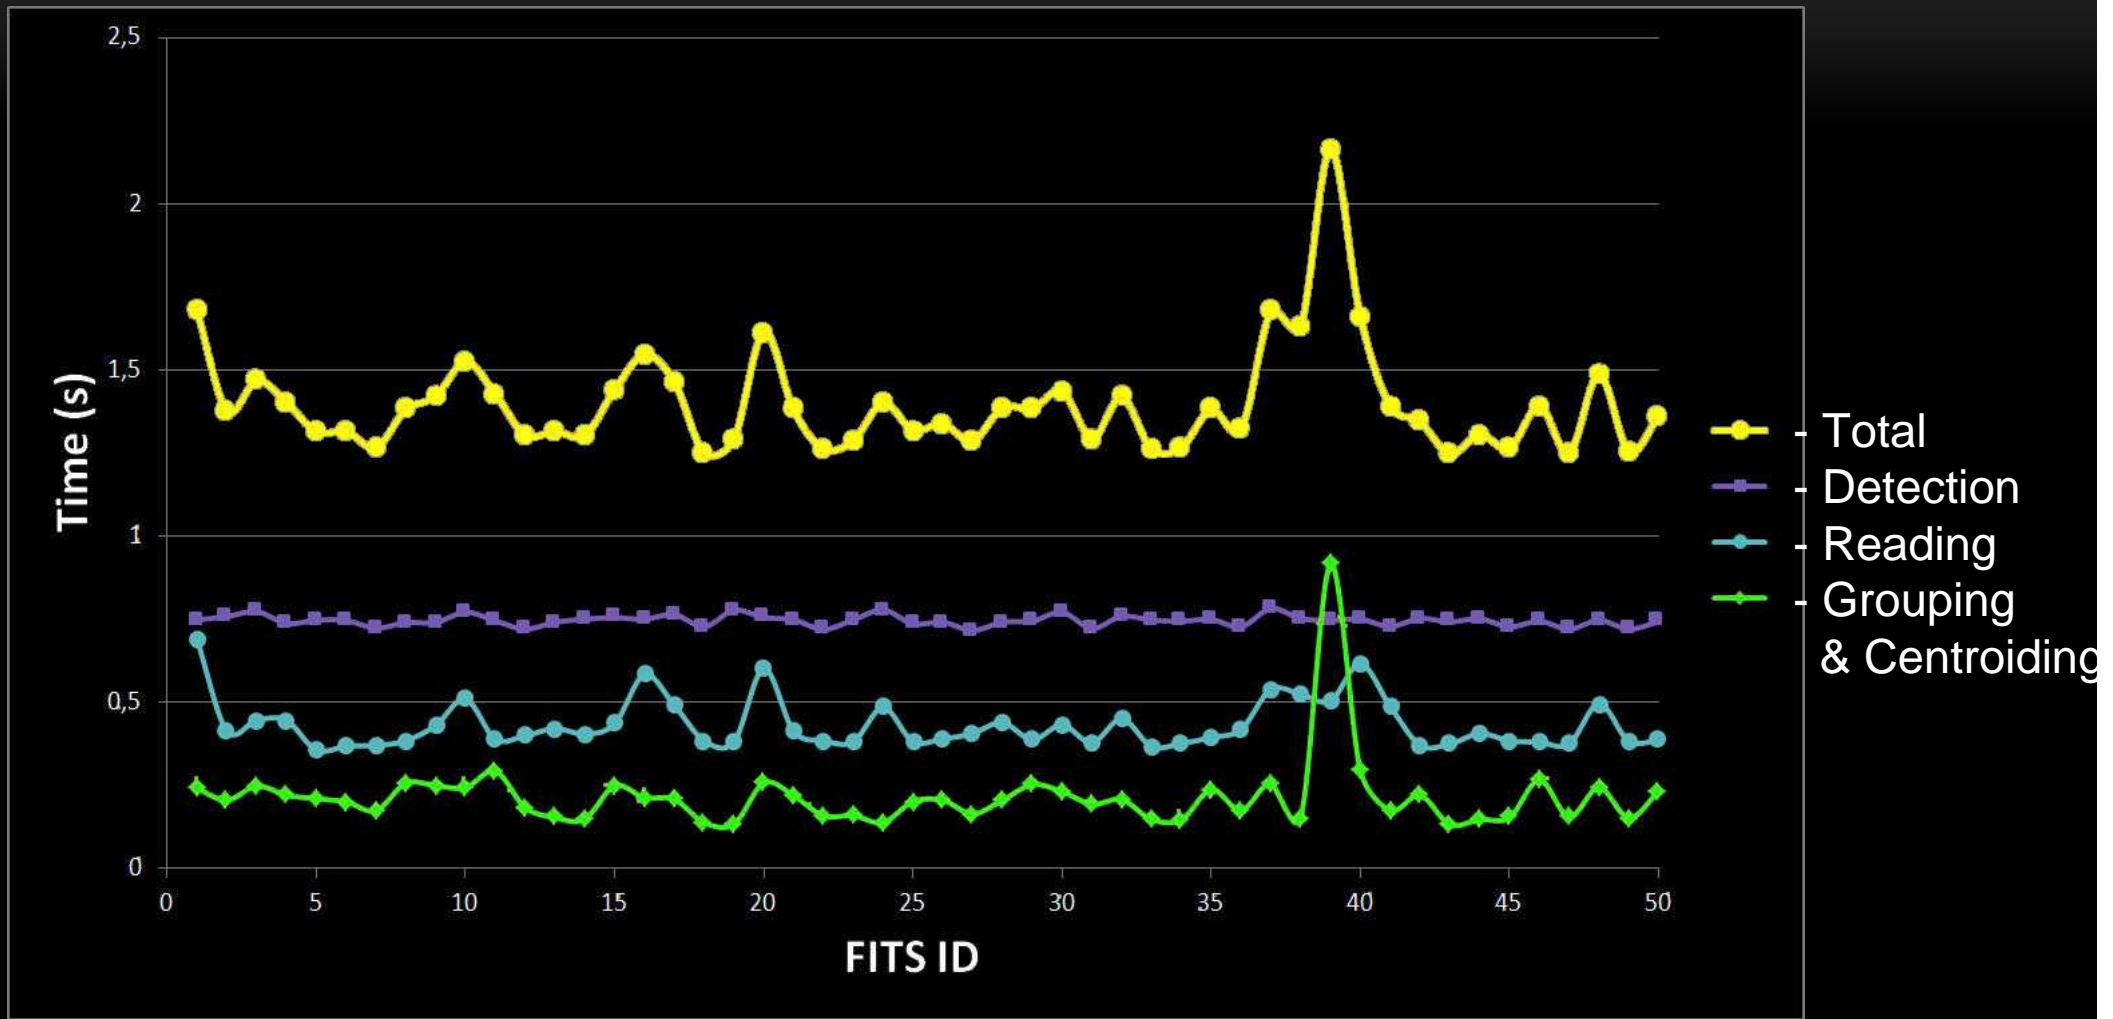

# THE "METEORFINDER" RESULTS – DETECTION

-  - Number of pixels > threshold
-  - Size of the biggest group
-  - Number of group detected

# THE "METEORFINDER" RESULTS – PROCESSING TIME

# THE "METEORFINDER" RESULTS – CENTROIDDING

# THE "METEORFINDER" RESULTS – DETECTION

# THANK YOU FOR YOUR ATTENTION
