

PyFN

MULTIPURPOSE METEOR SOFTWARE

Przemysław Żołądek

POLISH FIREBALL NETWORK

IMOGENA – currently used software

IMOGENA – a software suite which is able to calculate astrometry, photometry, trajectories and orbits

Created in 2005-2007

- User friendly interface
- Easy to use (but require some knowledge)
- Modular

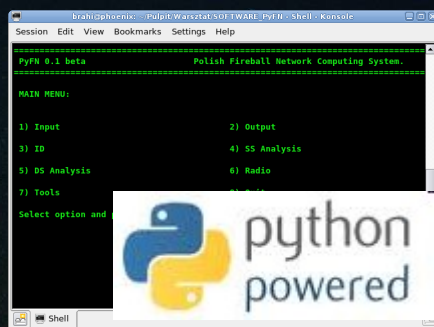

- Meteors are individually calculated, it's time consuming

New software requirements

- There is $\sim 10^5$ meteors in the PFN database. It's impossible to calculate it manually
- New software should be partially automated. Should work with large amount of data
- User will be able to control calculations and will reject low quality results
- Critical procedures should be created with trustworthy libraries like i.e. CSPICE

PyFN overview

Multi Instrument Input

Processing, linking, calculations

Libraries and modules

```
1  #! /usr/bin/env python
2  import os
3  import sys
4  import string
5  import datetime
6  import time
7  import array
8  import scipy
9  import pylab
10 import math
11 import numpy as np
12 import pyfnpice
13 import sidereal
```

NumPy is the fundamental package needed for scientific computing with Python. It contains among other things:

- a powerful N-dimensional array object
- sophisticated (broadcasting) functions
- tools for integrating C/C++ and Fortran code
- useful linear algebra, Fourier transform, and random number capabilities.

<http://numpy.scipy.org>

Libraries and modules

```
1  #!/usr/bin/env python
2  import os
3  import sys
4  import string
5  import datetime
6  import time
7  import array
8  import scipy
9  import pylab
10 import math
11 import numpy as np
12 import pyfnspice
13 import sidereal
```

SciPy (pronounced "Sigh Pie") is open-source software for mathematics, science, and engineering. It is also the name of a very popular conference on scientific programming with Python. The SciPy library depends on NumPy, which provides convenient and fast N-dimensional array manipulation. The SciPy library is built to work with NumPy arrays, and provides many user-friendly and efficient numerical routines such as routines for numerical integration and optimization

<http://www.scipy.org/>

Libraries and modules

```
1  #!/usr/bin/env python
2  import os
3  import sys
4  import string
5  import datetime
6  import time
7  import array
8  import scipy
9  import pylab
10 import math
11 import numpy as np
12 import pyfnspice
13 import sidereal
```

SPICE

The SPICE system includes a large suite of software, mostly in the form of subroutines that customers incorporate in their own application programs to read SPICE files and to compute derived observation geometry, such as altitude, latitude/longitude, and lighting angles.

Only few routines were wrapped in this module

<http://www.scipy.org/>

Libraries and modules

```
1  #!/usr/bin/env python
2  import os
3  import sys
4  import string
5  import datetime
6  import time
7  import array
8  import scipy
9  import pylab
10 import math
11 import numpy as np
12 import pyfnspace
13 import sidereal
```

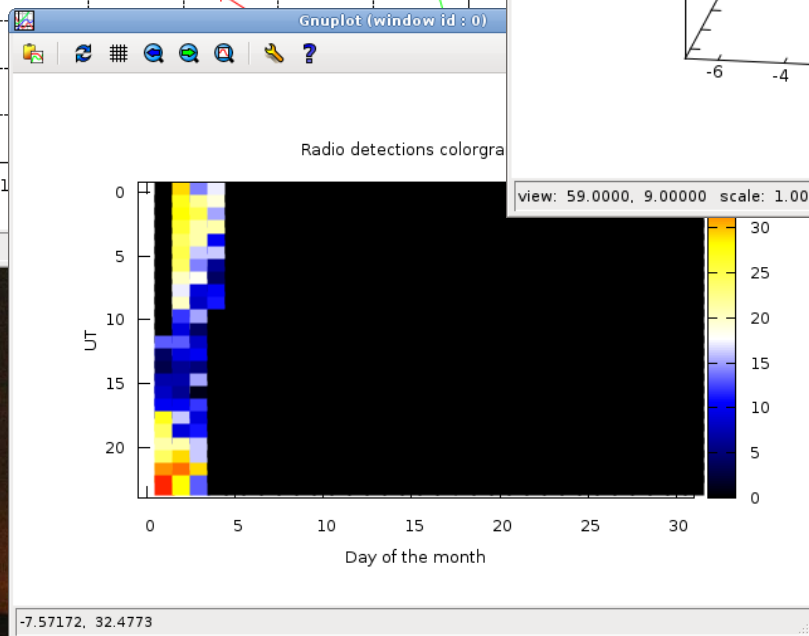

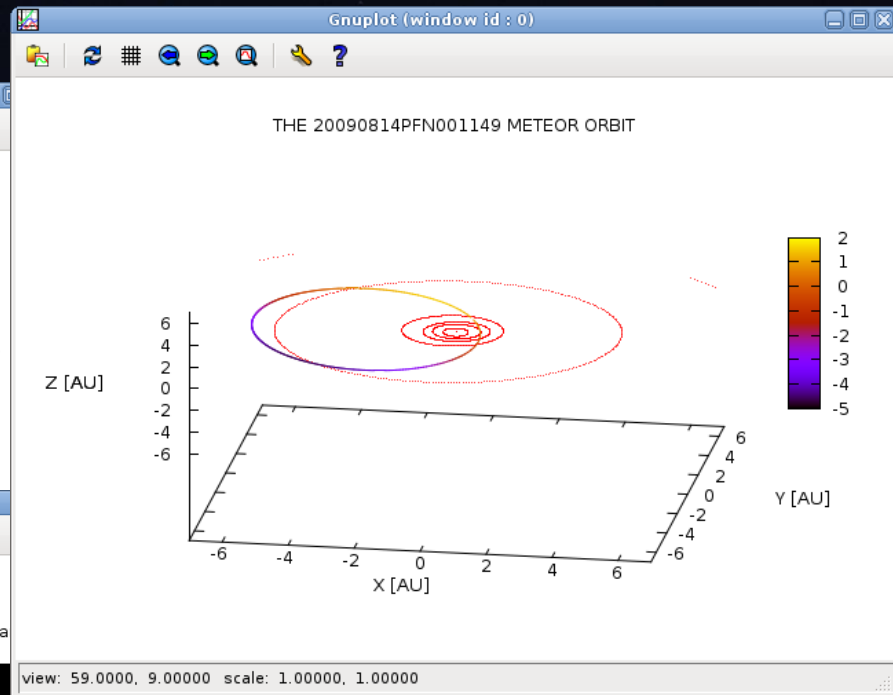

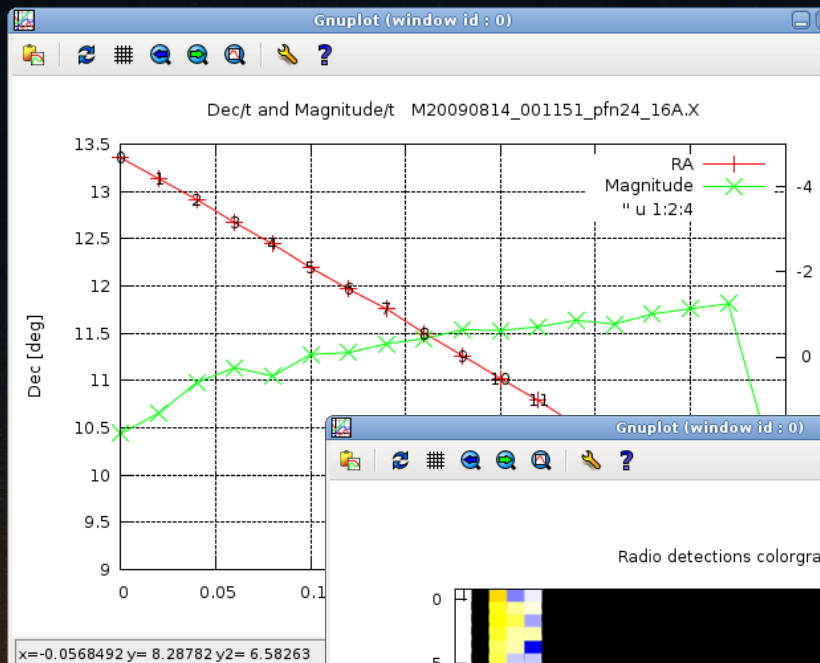

Sidereal.py

Python module used to simple calculations (Alt Az \rightarrow Ra dec conversion, sidereal time calculation etc.)

<http://www.scipy.org/>

Solar Longitude: 141.22762 [deg] Double: True Status: Not Data
-----
F1 - from the first magnitude, M2 - from the second magnitude, P1 - from the first
P2 - double meteor, M2 - double meteor point, other - correct the latitude error
M21 - double meteor, M22 - double meteor data, M23 - ground to calculate
M24 - from double meteor on the map, M25 - apply max time

Orbital calculations

Method described by Zdenek Ceplecha + CSPICE routine *oscelt.c*

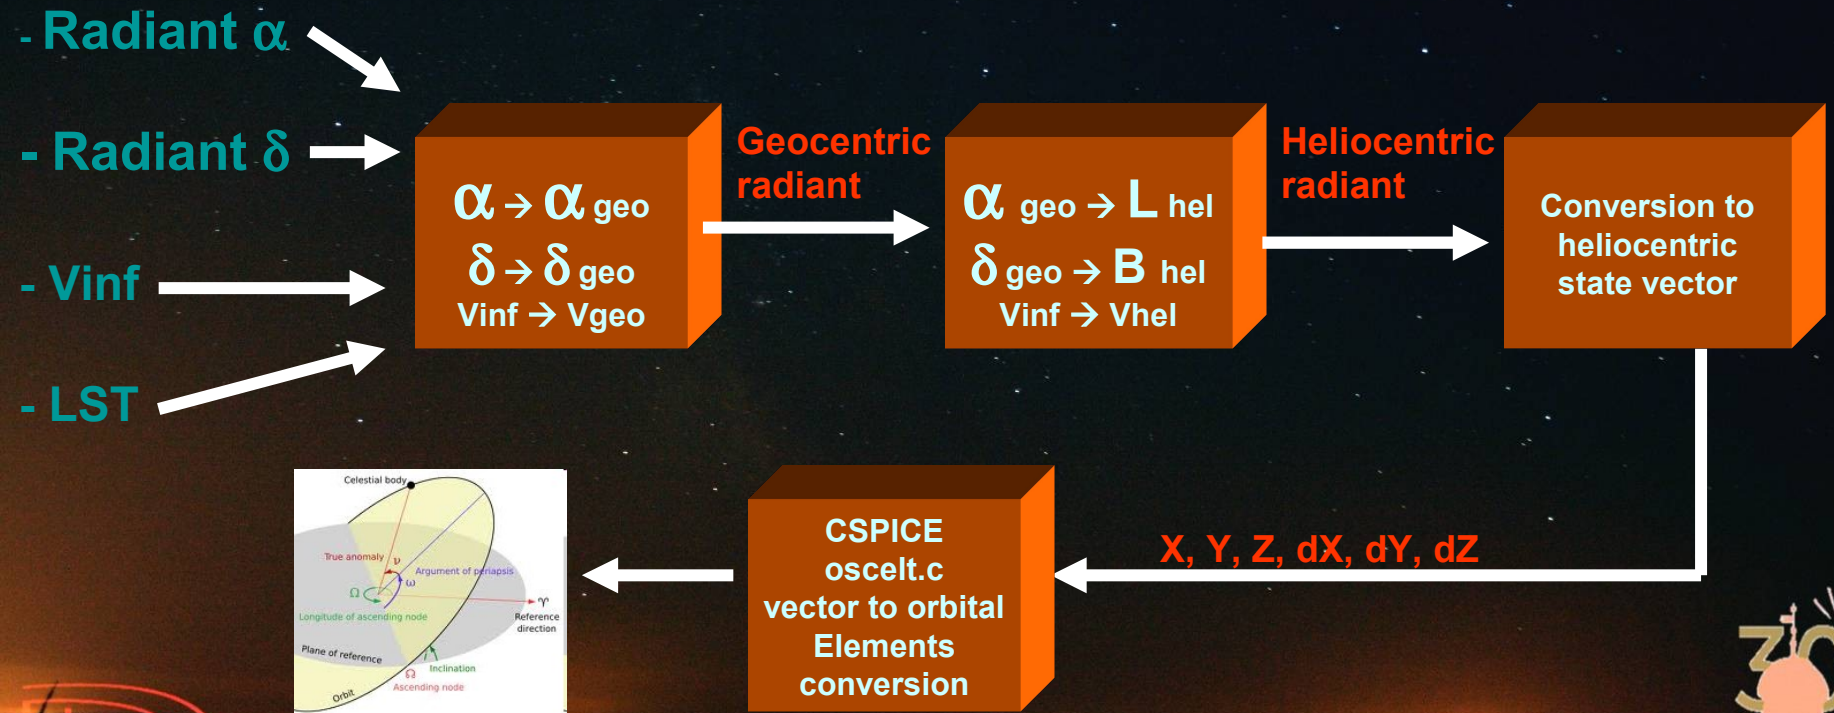

Title: **Geometric, dynamic, orbital and photometric data on meteoroids from photographic fireball networks**

Authors: Ceplecha, Zdenek

Affiliation: AA(Ceskoslovenska Akademie Ved, Astronomicky Ustav, Ondrejov, Czechoslovakia)

Publication: Astronomical Institutes of Czechoslovakia, Bulletin (ISSN 0004-6248), vol. 38, July 1987, p. 222-234.

Publication Date: 07/1987

Data output for meteor 20090814PFN001149
Stream: PER

f - find name of the fireball
d - check drummond criterion      ms - modify stream classification

t - add entry to trajectory table  o - add entry to orbital table
s - save dsm file                 k - save kml file
a - save all                       e - exit

Enter option:█
```
